

Financial Performance Analytics Dashboard

Project Overview

The Financial Performance Analytics Dashboard is an interactive business intelligence solution developed using Power BI. The objective of this project is to analyze sales performance, profitability, product trends, and regional performance through interactive dashboards. The report helps users monitor key business metrics and gain valuable insights for decision-making.

Objectives

- Analyze company sales performance
 - Monitor profit and profit margin
 - Compare regional performance
 - Identify top-performing products
 - Analyze salesperson performance
 - Track monthly sales and profit trends
-

Tools & Technologies

- Power BI Desktop
 - SQL
 - Microsoft Excel
 - Power Query
 - DAX
 - Python (Dataset Generation)
-

Dataset Information

The dataset contains approximately 1,000 records with the following fields:

- Order ID
- Order Date
- Customer Name
- Product
- Category
- Region
- Salesperson

- Quantity
 - Unit Price
 - Discount
 - Cost
 - Sales
 - Profit
-

Dashboard Pages

Page 1 – Executive Dashboard

KPIs

- Total Sales
- Total Profit
- Profit Margin
- Total Orders
- Average Order Value

Visualizations

- Monthly Sales Trend
- Sales by Region
- Sales by Category
- Profit by Category
- Top Products
- Top Salespersons

Interactive Filters

- Year
 - Region
 - Category
 - Salesperson
-

Page 2 – Sales Analysis Dashboard

Visualizations

- Monthly Sales Trend

- Monthly Profit Trend
- Sales by Product
- Profit by Product
- Sales vs Profit
- Top Salespersons

Additional Features

- Interactive transaction table
 - Date range filter
 - Region filter
 - Category filter
 - Salesperson filter
-

DAX Measures

- Total Sales
 - Total Profit
 - Total Orders
 - Total Quantity
 - Average Order Value
 - Average Selling Price
 - Profit Margin %
 - Product Rank
 - Salesperson Rank
-

SQL Concepts Used

- SELECT
- WHERE
- GROUP BY
- ORDER BY
- Aggregate Functions
- JOIN
- HAVING

- Subqueries
 - Window Functions
-

Key Business Insights

- Electronics generated the highest revenue.
 - Top salespersons contributed significantly to total sales.
 - Monthly sales showed noticeable seasonal variations.
 - Regional analysis identified the best-performing markets.
 - Product analysis highlighted the most profitable products.
-

Conclusion

This project demonstrates end-to-end data analytics using SQL, Excel, Power BI, Power Query, and DAX. The dashboards provide interactive visualizations that enable business users to monitor performance, identify trends, and make data-driven decisions.
